EDUCATION

Dayananda Sagar College of Engineering

B.E. Information Science

Sept. 2027

CGPA: 9.0

SKILLS

Languages: C/C++, Python, JavaScript, TypeScript

Backend: FastAPI, Node.js, Express, Flask, REST APIs, Microservices

Databases: PostgreSQL, SQL, MongoDB, Redis

Cloud & Infrastructure: AWS, Docker, Linux CLI, Vercel, Render

Tools: Git, GitHub Actions, Playwright, Postman, N8N, Stripe, Razorpay

Frontend: React, Next.js, TailwindCSS, Vite

PROJECTS

Scopuz - AI Search Optimization Platform

FastAPI, React, Python, Playwright, MongoDB, AWS, Stripe, Razorpay

[Repo](#) [Demo](#)

- Built an AI search optimization platform that audits websites across 20+ AEO/GEO signals, generating deterministic visibility scores and actionable recommendations.
- Engineered a hybrid crawling pipeline using Playwright and HTTP requests to analyze metadata, structured content, schema, citations, indexability, trust signals, and technical accessibility.
- Developed historical intelligence to track new issues, resolved issues, regressions, and changes across recurring website audits through dashboard-based reporting.
- Deployed the FastAPI backend on AWS EC2 using Docker, Nginx, HTTPS, and CI/CD, integrating MongoDB, OAuth authentication, and webhook-driven Stripe/Razorpay subscriptions.

Enterprise AI Decision Copilot

FastAPI, Pandas, ChromaDB, Gemini API, Streamlit

[Repo](#) [Demo](#)

- Developed an AI-powered decision copilot that lets users upload business datasets and query them using natural language, combining deterministic analytics with LLM-generated insights.
- Engineered a hybrid analytics pipeline where Pandas performs numerical analysis while Gemini generates grounded business insights using context retrieved from ChromaDB.
- Implemented a verification layer that validates LLM-generated numerical claims against source data, reducing hallucinated statistics and supporting automatic API key rotation for uninterrupted inference.

Faculty Performance Management & Appraisal System

Node.js, Express, MongoDB, React, JWT, Cloudinary, REST APIs

[Department Project - Deployed at DSCE]

[Repo](#)

- Built a role-based faculty performance management system supporting Faculty, HOD, External Auditor, Principal, and Admin workflows through REST APIs.
- Implemented JWT authentication, role-based access control, OTP verification, password recovery, and protected API endpoints with role-specific authorization.
- Developed automated evaluation processing and PDF report generation with MongoDB-backed data management and Cloudinary integration for file uploads.
- Added rate limiting, input validation, audit logging, and security controls designed to support 200+ concurrent users across authentication and application APIs.

LEADERSHIP & ACTIVITIES

Team Head – Mudita, DSI

Nov 2023 – Present

- Led community initiatives by coordinating team activities, managing outreach efforts, and supporting project execution through content and social media initiatives.

Technical Team Head – Genesis ISE

Nov 2024 – Present

- Contributed to planning and execution of technical events including Hackman and Catalysis while collaborating with teams to ensure smooth coordination.

Code of Honour 2.0: Secured **4th place** in a 30-hour hackathon organized by Shunya, The Mathematics Club of PES University, in collaboration with Samarpana India.

Achievements: AGMTA Mathematics Quiz Winner • State-Level Gold in Athletics, Football & Rope Skipping
